

Linux Environment

- If you are dealing with HTS data, you can not avoid running programs that are implemented for Linux.
 - MacOS is almost Linux..., Windows is not.
- HiPerGator is your Linux workhorse @ UF.
 - Class account for the semester only.
 - Training videos are helpful (linked from the course website).

Practice – Watch the HiPerGator introduction video by Dr Matt Gitzendanner.

Linux Commands

- Navigating the system with
pwd, ls, cd,
- Manipulating files with
cp, mv,
- **Avoid space** In file or folder name.
- View files with less, more, tail,

User Rights

- Many time program fail to run or finish because you do not have the necessary rights.
- Use “**ls -l folder**” to see restrictions/permission to folders and files.
- Use “**chmod** ” to modify permission.
